

CERTAINTY AT SCALE

[OUR PROMISE]

WORK THAT LASTS

COMPANY OVERVIEW

SEE Group is an award winning, family owned civil construction company founded in Tweed Heads in 1988. We operate across civil infrastructure, urban development, quarrying and materials processing, and plant management, delivering projects across diverse sectors for more than three decades.

Our four businesses, SEE Civil, SEE Mining, SEE Quarry and SEE Fleet, provide an integrated delivery model that ensures efficiency, flexibility and certainty of supply.

For more than 35 years, we have built long term client relationships by delivering safe, high quality outcomes with certainty and consistency.

A FOUNDATION FOR SUCCESS

[INTEGRITY]

**OWN OUR
INPUT**

We uphold accountability and ethical conduct in all our actions. This means making decisions we can stand by, taking responsibility for our actions and work, and ensuring that safety is everyone's responsibility.

[INNOVATION]

**LOOK
AHEAD**

We continuously seek new ways to improve and excel. We're agile and flexible in our approach, always developing our skills and expertise, and remaining open to new ideas and innovative solutions.

[COMMUNITY]

**WORK
AS ONE**

We're all about teamwork, collaboration and collective growth. We celebrate success and achievements together, work as one cohesive team and ensure we recognise and utilise everyone's skills and contributions.

[DEDICATION]

**GIVE OUR
ALL**

We're passionate and committed in everything we do. We work with a 'boots and all' attitude, driven towards success and maintaining a strong commitment to our goals and objectives.

OUR SOLUTIONS

WE PRIDE OURSELVES ON BEING COLLABORATIVE AND EASY TO WORK WITH.

SEE Group is a family-built business with a results-driven, transparent approach — delivering projects safely, on time and on budget. Combining expertise across our businesses, we provide innovative, fit-for-purpose solutions throughout the mining and civil construction lifecycle, with the agility and problem-solving edge to meet the demands of the resources sector.

SEE CIVIL

PRACTICALLY VISIONARY

BUILDING THE FUTURE WITH PRACTICAL INNOVATION.

SEE Civil specialises in construction and engineering solutions for major infrastructure projects in urban and industrial development, road and rail infrastructure, aviation and natural disaster reconstruction in Queensland and New South Wales.

SEE MINING

POWERING EXCELLENCE

DELIVERING INTEGRATED MINING SOLUTIONS.

SEE Mining is a leading mining contractor, capable of working in diverse environments and providing integrated services including mine establishment and infrastructure works, bulk earthworks, mine closure and rehabilitation works.

SEE FLEET

MODERN FLEET SOLUTIONS

DRIVING PROGRESS THROUGH RELIABLE FLEET MANAGEMENT.

SEE Fleet offers reliable fleet solutions with comprehensive maintenance services including logistics, whole-of-life asset management, scheduled maintenance and repairs, major equipment overhauls, design, fabrication, blasting, and painting.

SEE QUARRY

UNEARTHING SOLUTIONS

UNEARTHING SMARTER SOLUTIONS EVERY DAY.

SEE Quarry specialises in quarrying and material supply, and is a market leader in the delivery of high volume, high specification material supplies to projects including fixed and mobile crushing operations through to sand mining.

MATERIAL SUPPLY

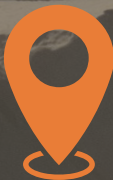

We are a major project material delivery specialist with the capability and capacity to source, negotiate and legitimise quarry resources for major project and as part of existing quarry markets.

INDUSTRY LEADERS

We are industry leaders when it comes to mobile crushing and screening. Our experience managing multiple sites concurrently means we can scale production up or down as required, even when working remotely.

LOCATION

Our mobile quarrying operations perform works at remote locations across Queensland (QLD) and New South Wales (NSW).

OUR CLIENTS

We deliver high-volume and high-quality materials for a range of clients including state road authorities, local councils and private developers.

PROCESSING- POWER

SEE is the high volume quarry specialist, delivering unmatched crushing and screening capability for major infrastructure projects. Backed by 35 years of experience and trusted by state road authorities, our in house designed plant enables faster production, greater reliability and reduced project footprint across large scale and remote environments.

Our approach is not off the shelf. Projects are engineered in house to maximise throughput, improve material recovery and maintain consistent product quality under sustained high production demands.

A key differentiator is our specialised trommel integration, designed to optimise yields, enhance material separation efficiency and eliminate bottlenecks within the circuit. The result is faster processing, higher recoverable volumes and reliable output at a scale no competitor can match, reducing production time, lowering onsite storage requirements and driving measurable cost savings for our clients

[AGGREGATES]

PRECISION GRADING

8,000,000+

TONNES DELIVERED

Across 155 km

SEE played a critical role in the delivery of the Woolgoolga to Ballina Pacific Highway upgrade (W2B), acting as the sole supplier of high quality concrete aggregates for this landmark project.

From Petersons Quarry, approximately 1.2 million tonnes of aggregate stock was produced within the first 12 months to support the scale and pace of construction. This sustained high volume output underpinned one of the most significant road infrastructure upgrades undertaken in Australia.

As the sole supplier of paving aggregates for the W2B project, which included the largest continuous concrete paving operation ever undertaken in Australia, SEE delivered specification compliant material at unmatched production rates.

Our in house designed crushing and screening trains ensured precise grading, consistent quality and uninterrupted supply, enabling continuous paving at scale while reducing production risk and onsite constraints.

Across the 155 kilometre length of the W2B Project, SEE manufactured more than 8,000,000 tonnes of specification compliant gravels and aggregates, delivering sustained high volume output.

[OUR CLIENTS]

STRATEGIC DELIVERY FOR PUBLIC CLIENTS

CITY OF
GOLD COAST

ULTRA HIGH VOLUME PROCESSING

SEE bring proven mine site scale capability through fully integrated load, haul and high volume processing solutions, including:

- Mine fleet load and haul integration;
- Direct mine truck feed crushing systems;
- High volume crushing and screening trains;
- Stockpile management.

SEE delivers mine site scale operations through fully integrated load, haul and processing solutions, aligned to site specific product requirements and production targets.

Our capability extends beyond crushing and screening to the coordination of mine fleet operations, ensuring seamless interaction between excavation, haulage and high volume processing to achieve consistent specification compliant outputs.

This integrated approach maximises production efficiency, reduces material handling constraints and maintains operational continuity in demanding mining environments. Supported by our in house designed high capacity plant and engineered processing trains, we sustain exceptional throughput while maintaining strict quality control, delivering predictable high volume output, reduced project risk and optimised site footprint for our clients.

PROVEN DELIVERY

PROVEN DELIVERY IN THE MINING SECTOR

With comprehensive operations systems, commercial agility, and a strong track record in collaborative project execution, SEE is recognised as a preferred delivery partner for major quarrying campaigns across Australia.

Our ability to scale rapidly, integrate seamlessly with client's existing operations and procedures, and maintain consistent performance across complex and remote environments continues to attract repeat clients and long-term partnerships.

OUR APPROACH

OUR APPROACH TO SAFETY

SEE is committed to eliminating harm, reducing risk and leading by example. By integrating smart technologies with behavioural accountability and visible leadership, we are creating safer, smarter, and more resilient project teams; where safety is not just a system, but a shared responsibility embraced by all.

Our ISO 45001-accredited safety management system, combined with hands-on leadership and demonstrated commitment to open and transparent communication, fosters a proactive safety culture that protects our people, our clients, and the communities in which we operate.

OUR INNOVATION

ENERGY EFFICIENT HIGH CAPACITY

Our 240 tonne eccentric roller crusher (ERC) brings a significant innovation to our high volume processing offering by combining crushing and pre-screening into one highly efficient unit that reduces energy use, boosts capacity and improves product quality. The eccentric motion and integrated screen design enable higher reduction ratios and continuous throughput with less power compared to traditional primary crushers, often eliminating the need for secondary crushing stages and lowering operating costs.

Compact and robust, the eccentric roller crusher also simplifies installation, reduces maintenance requirements and delivers consistent, specification compliant material at the elevated production rates our major infrastructure and mining clients demand.

TROMMEL SCREENING FOR MAXIMUM EFFICIENCY

Our trommel screen strengthens our high volume crushing and screening capability by delivering efficient, continuous material separation through its rotating drum design. Unlike conventional screens, it handles wet and variable feed with reduced clogging and downtime, maintaining consistent high throughput.

By integrating trommel technology into our in house engineered systems, SEE improves yield, ensures precise size classification and delivers specification compliant aggregates at the speed and scale unmatched in Australia.

OUR EXPERTISE

As a trusted contractor in the Infrastructure and Mining sector, SEE Group has a proven track record of delivering high-quality, fit-for-purpose project quarry solutions for leading mining and Government clients.

PROVEN AT MAJOR INFRASTRUCTURE SCALE

Backed by more than 35 years of operational expertise, SEE delivers mine site and infrastructure scale crushing and screening solutions defined by engineered innovation, high volume capability and absolute production certainty.

Our in house designed plant, advanced technologies including eccentric roller crushing and optimised screening systems, and fully integrated load, haul and processing approach position us as industries unmatched high volume specialist.

We do not simply process material. We engineer reliable, specification compliant outcomes at speed and scale, reducing project timeframes, minimising site footprint and giving our clients the confidence of consistent performance on every project.

[OUR EXPERTISE]

TRUSTED CONTRACTOR IN THE QUARRY SECTOR

[SAFETY FOCUS]

Uncompromising commitment to safe operations.

[PROVEN EXPERIENCE]

Major quarry projects delivered for leading clients.

[OPERATIONAL EXCELLENCE]

On time high-quality delivery.

[REMOTE CAPABILITY]

Specialised expertise in difficult environments.
